

AMENDMENTS TO THE CLAIMS

This listing of claims will replace all prior versions, and listings, of claims in the application:

- 5 1. (Original) A device comprising:
a switch, disposed on said device, for turning power to a receptacle on or off;
a member coupled to the device and having a first position which prevents a
plug from being inserted into said receptacle and a second position which allows the
plug to be inserted into the receptacle; and
10 connecting means coupled to said member and to said switch to enable said
switch to connect the receptacle to a source of power when said member is in said
first position.
- 15 2. (Original) The device of claim 1 wherein said connecting means disables
said switch from connecting said receptacle to a source of power when said member
is in said second position.
- 20 3. (Original) The device of claim 1 and further comprising a locking means
for locking the plug to the receptacle when said member is in said first position.
4. (Original) The device of claim 3 wherein said locking means disables
said receptacle from accepting said plug when said member is in said first position.

5. (Original) The device of claim 1 wherein said connecting means turns said switch to the off position when said member is moved from the first position to said second position.
- 5
6. (Original) The device of claim 1, wherein the plug and the receptacle are standard receptacles.
7. (Original) The device of claim 1, and further comprising a mounting lug
- 10 disposed on said housing.
8. (Original) The device of claim 1, and further comprising a gasket mounted on said receptacle.
- 15 9. (Original) The device of claim 5, further comprising a gasket hold down clamp mounted on said receptacle.
10. (Original) The device of claim 1, wherein said connecting means comprises a first linkage and a second linkage, said first linkage and said second
- 20 linkage are connected to each other.

11. (Original) The device of claim 10, wherein said first linkage is connected to said member.
12. (Original) The device of claim 10, wherein said second linkage is operable to operate said switch.
13. (Original) The device of claim 10, and further comprising a cam attached to said switch.
14. (Original) The device of claim 13, wherein said second linkage is operable to move said cam thereby moving said switch.
15. (Original) The device of claim 1, further comprising:
a spring clip attached to said member; and
an indexer operably attached to said spring clip to cause said member to remain in said first or said second positions.
16. (Original) The device of claim 15, further comprising:
knubs attached to said spring clip; and
indentations disposed on said indexer, such that said knubs on said spring clip fit into said indentations.

17. (Original) A housing comprising:
- a receptacle;
 - a member coupled to the housing and having a first position which prevents a
5 plug from being inserted into or removed from the receptacle and a second position
which allows a plug to be inserted into or removed from the receptacle, and
connecting means coupled to the member to enable the receptacle to be
connected to a source of power when the member is in the first position.
- 10 18. (Original) An actuating mechanism for operating a switch and other
electrical device comprising:
- an enclosure including an electrical plug receiving receptacle;
 - a switch which is selectively positionable in "on" or "off" positions, said
switch being electrically connected with said receptacle; and,
 - 15 a handle which is movably mounted on the exterior of said enclosure;
 - an actuating linkage means for operatively connecting said switch and said
handle such that when said handle is in a first position a plug may be connected to
said receptacle and said switch may not be placed in the on position, and a second
position which keeps a plug from being inserted or removed when said switch is
20 placed in the on position.

19. (Original) The mechanism as set forth in claim 18, further including a locking means operatively connected with said actuating linkage and with said receptacle for locking said toggle switch lever in the "off" position in the absence of a plug fully received in said receptacle and for locking said plug fully received in said receptacle in the absence of said switch being in the "off" position.

20. (Original) A method of coupling a plug to a receptacle comprising the steps of:

providing a member having a first position for blocking the plug from being inserted into or being removed from the receptacle and a second position for permitting the plug to be inserted into or removed from the receptacle;

placing the member into the second position;

connecting the plug to the receptacle;

moving the member into a second position where the plug may not be removed from the receptacle and enabling the receptacle to be coupled to a source of power.

21. (Original) A method of coupling a plug to a receptacle comprising the steps of:

moving, to a first position, a member coupled to a switch, the member having a first position which allows the plug to be inserted into or removed from said receptacle;

connecting the plug to the receptacle;

5 moving, to a second position, the member coupled to a switch, the member having a second position which prevents the plug from being inserted into or removed from the receptacle; and

moving a switch from an off position to an on position, the switch only operable to be moved to an on position when the member is in the second position.

10

22. (Original) The method of claim 21, wherein the step of moving, to a second position, locks the plug into the receptacle.

23. (Original) The method of claim 21, wherein the switch is turned to the off position if the member is moved from the second position to the first position.

15

24. (New) A housing comprising:

a receptacle;

a member coupled to the housing and having a first position which prevents a plug from being inserted into or removed from the receptacle and a second position

20 which allows a plug to be inserted into or removed from the receptacle, and

switching means to enable the receptacle to be connected to a source of power.

25. (New) A switching mechanism for operating an electrical device comprising:
5 an enclosure including an electrical plug receiving receptacle;
a switch which is selectively positionable in "on" or "off" positions, said
switch being electrically connected with said receptacle;
a handle which is movably mounted on the exterior of said enclosure from a
first to a second position;
10 mechanical means operable such that when said handle is in a first position a
plug may be connected to said receptacle, and a second position which keeps a plug
from being inserted or removed.

26. (New) A device comprising:
15 a switch, disposed on said device, for turning power to a receptacle on or off;
a member coupled to the device and having a first position which prevents a
plug from being inserted into said receptacle and a second position which allows the
plug to be inserted into the receptacle.

- 20 27. (New) The device of claim 26, wherein the plug and the receptacle are
standard receptacles.

28. (New) The device of claim 26, and further comprising a mounting lug disposed on said housing.

5 29. (New) The device of claim 26, and further comprising a gasket mounted on said receptacle.

30. (New) The device of claim 29, further comprising a gasket hold down clamp mounted on said receptacle.

10
